

Environment Policy

ANZRP is dedicated to making our world cleaner and healthier by sustainably managing e-waste. We are committed to working with the community to collect, process and safely recycle waste products for responsible environmental outcomes. By working in conjunction with industry partners, government, our members, customers and the public we strive to be leaders in the field of product stewardship. We are dedicated to implementing product stewardship programs for used products to reduce their environmental impact at end of life and to prevent pollution. We are committed to moving toward a circular economy and the implementation of Product Stewardship approaches for suitable materials.

We are committed to minimising the environmental impact of our operations and supply chain and the promotion of circular economy practices that result in resource conservation. We strive to be a leader in being environmentally sustainable, outperform applicable standards and achieve best practice. We maintain full compliance with all applicable regulatory requirements as well as voluntary requirements to which we subscribe including certification to ISO 14001:2015 and B Corporation. We set environmental objectives and targets for our key environmental impacts and regularly monitor our progress.

It is a requirement of ANZRP that all of our suppliers and contractors also conduct their operations in a socially and environmentally responsible manner and work to outperform applicable standards. We monitor this through our Compliance and Assurance Procedure and stakeholder engagement processes.

Finally, we will facilitate transparency in our reporting by openly communicating our environmental performance including lifecycle assessment, challenges we encounter and achievements we make to our employees, members, customers, service providers and interested stakeholders.

It is important to the success of our environmental management system and vision for continual improvement that all employees are aware of their role and responsibilities in sustaining ANZRP's environmental management system and policy.
